## Advanta Witty Turbo Crack

Lizzie, I have been doing weird things to find the phone is in my best possible to work, and my web developer did recommend gethroot, would you do anything to acc. Q: Python: merging 2 dictionaries values I have a function to merge two dictionaries with a key into a new dictionary. dict1 = {'a': 'z', 'b': 'x', 'c': 'y'} dict2 = {'a': 'aa', 'b': 'bb', 'c': 'cc'} merge = {\*\*dict1, \*\*dict2} print(merge) output: {'a': 'aa', 'b': 'x', 'c': 'y'} I want to preserve the values from the first dictionary and also merge the values in the same position in the new dictionary. Example: def merge(dict1, dict2): for key, value in dict1.items(): for key, value in dict2.items(): merge = {value} print(merge) merge(dict1, dict2) The output should be: {'a': 'aa', 'b': 'aa', 'c': 'yy'} A: You can do this with dict comprehension (if you don't need the keys of dict1 and dict2): {a: dict1[a]+dict2[a] for a in dict1.keys()|dict2.keys()} If you need the keys, then it is a simple loop: [k: v for k, v in {dict1[k], dict2[k] for k in dict1 if k in dict2} ] Q: puppeteer.click() method not working I am trying to figure out how to simulate a click on a web link element. I can successfully get the element using css-selectors and I know that there are examples of click works with puppeteer. So far I have tried the following: click() method: await page.click("#dashboard-container a:contains('Product List')"); Click 3da54e8ca3
