With the release of AutoCAD LT for the PC, AutoCAD was renamed again, this time to AutoCAD 2002. The successor to AutoCAD 2002 was AutoCAD LT, which included features such as parametric 2D modeling, digital rendering, component based workbenches, and digital pen support. In 1993, AutoCAD LT 2.0 was released. In 1994, AutoCAD LT 2.5 was released for the Macintosh. AutoCAD LT 3.0 was released in 1995 for the PC, and the first version of AutoCAD that ran on Windows NT 3.51. Elements There are several elements in AutoCAD, including geometric shapes and objects such as lines and circles. They can be applied to surfaces, such as a wall, and objects in the drawing, such as a text box. They can be edited, moved, and scaled. They can be annotated by drawing with specific symbols such as line and color. Attributes and options Several attributes and options can be applied to elements, such as the color or fill pattern for a line or shape. Options include a bounding box, a grid, snap (of which there are several types), and a 3D scale. A 3D element can be saved as a file for reuse. Rendering In addition to viewing, changing and modifying shapes, it is also possible to display a shape with specific characteristics in the 3D workspace. This includes displaying a shape with a color, a pattern, with wireframe or hidden. Furthermore, it is possible to turn a shape on or off to better view the underlying structure or the 3D geometry. Rotation and translation AutoCAD offers several features that allow you to rotate and move objects, including the ability to rotate the viewing and design environment. It also allows for translation of the entire drawing and specific layers. A feature called snap mode allows for a selection of points on a drawing which will be fixed in space. Geometry Shapes can be exported to DXF, a format for importing and exporting data. The DXF format is similar to a spreadsheet; however, it allows for specific objects to be attached to each other. Empowering the world through education Main menu Post navigation Body Learning All children are different but, within them, there is a need to explore, experiment, get stuck, run away, solve problems, and exercise their creativity. Young children spend a lot of time playing and, like all children, they play in their own way. Within the domain of play they are free to be themselves. When young children get frustrated by the lack of tools to play safely with, for example, climbing around tables and chairs, they sometimes smash them. If they do this a lot of the time, when they do manage to solve a problem, they feel disappointed by the whole exercise, which stops them from having a lot of fun and learning. Young children learn as much from playing with things they find as from learning from books. It is only by trying things out that they can learn. They learn from doing. They learn from play. They learn through working, though many people would deny that children need to work. They learn from doing
