Category:Test banks (technical) Category:Information technology books Category:Professional and trade books Category:Manuals and guide books[Effects of Ilomastat, a specific inhibitor of MMP-2 and MMP-9, on acute pancreatitis in rats]. A specific inhibitor of matrix metalloproteinases (MMP) -Ilomastat (CM-2036)- was administered for 3 days consecutively to rats with cerulein-induced acute pancreatitis (AP). Administration of CM-2036 at the dose of 10 mg/kg decreased the activities of both MMP-2 and MMP-9, reduced myeloperoxidase (MPO) activity in the pancreas and improved the symptoms of AP. Histological examination revealed that CM-2036 inhibited to a certain extent the infiltration of inflammatory cells to the pancreas, suggesting that Ilomastat itself decreases inflammation. These results suggest that Ilomastat is a new useful agent to treat AP in the early stages.) { \/* This callback has not been registered, mark it as missin */\ *p_n = *(p_n + 1); \ } \ return BC_ERR_OK; 1cb139a0ed
