The first step to making changes to your image is to open it. Before you begin a project, open the image that you would like to work on by clicking it in the Organizer. If your image is in the Background layer, it will open in Photoshop by default. If your image opens in the Layers window, you must make the Background layer visible and merge the Background layer with any other layer(s) that you want to include in your image. (See Chapter 5 for more info on layers.) To begin editing your image, open the menu and choose File>New from the menu, or press Shift+F3 to open the New dialog box. You can click the Add Layer button to add a new layer to the image or the Copy Layer button to copy an image from another layer. Click the Switch to Edit Mode button to switch to the painting brush tool or the eraser tool, or click the Layer Mask button to turn on a layer mask. You can also click the Drawing Tools panel and the Hand tool to bring up the drawing tools. You can click the Use the Background Color check box to use the Background color of your image as the color for the new layer. The Background color is referred to in the Layers panel as the _Background color_ (represented by a color swatch) or the Background layer. A new layer is created with a default name. If you want to change the layer's name, select the new layer in the Layers panel and click the red square on the right side of the name to rename it. Click on the Layer Mask icon (the icon with the white paintbrush) to make a layer mask. You can adjust the opacity of the layer mask to create an image that can be manipulated. See the later section "Changing an image's background color" for more on creating a layer mask. The original layer is typically not visible, but the Layer Mask icon in the layers panel shows the inverse of the mask, which is black. If the mask is visible, look for the Layer Mask icon in the layers panel to check the opacity of the mask. When a layer's opacity is set at 100 percent, a layer mask is turned on and the mask is visible. The effect of a layer mask is added to the picture when your image is viewed (see Chapter 5). If the layer mask is not visible, check the Layer Mask option on the Layers panel menu (see the left side of Figure 11

The company already has some familiarity with the automatic-shutoff technology after testing it with a robot called Smartie at its Park City, Utah, headquarters. But Coke Zero, as it's being called now, needs to work out a few kinks, company officials say. The machine has to be "full-blown ready to go," Keller says. Of course, the actual impact on employees isn't the primary concern. "There's something about [automated] cooling," says David Clagherty, a staff consultant for the American Management Association. "It makes me feel tired." But automation is just the latest step in a long journey for companies trying to give workers a break. Companies have been taking their most important assets—their most valuable commodities—and turning them into automated things that do the work.
