Style Jukebox Screenshots: HomepageQ: get the item on the left side of selected item in a listbox I have a list box and the itemsource is a class containing list of string(I'm using MVVM). I bind the itemsource to the listbox. The listbox has an item on the left side. when clicked the right side will show the items of the list item which is in the left side. How to get the item on the left side of the selected item in the listbox using MVVM A: You can use the SelectedItem property to get the object selected in your ListBox A: you can use SelectedItem With listbox Facebook Twitter LinkedIn Email Energy Iran's economy may be undergoing a full-fledged transformation, but the country is still burning oil for energy. While Iran has made progress in the last decade in terms of adding manufacturing and services, the country remains heavily reliant on the energy sector for economic growth. Like many countries, Iran also faces the challenge of rising prices of oil and natural gas. Global competition in producing these commodities has driven up prices, leading to inflation and the need to reform the value-added tax and government spending policies. The country now has a geopolitical environment unlike any it has faced

What's New In?

Style Jukebox is a music player, that resides in your computer's windows area and starts to listen to the music when the computer is started. The music player is extremely easy to handle. Creating Playlists is a breeze. Right click or press the space bar on your keyboard and select the song or artist you want to add. Searching within the music library is also easy, just start typing a search word, or artist name or song title into the box and Style Jukebox will list the results. Browse for songs, albums, artists or genres. If a song is playing it will pause or stop or if the currently playing music is paused or stopped then it will rewind the currently playing song. If an album is playing, the currently playing song will pause. When you select an artist the currently playing song will stop then the artist will be listed. If you double click on the artist that is currently playing the entire album will be listed. You can change the music volume at any time during playback. You can have many songs playing at the same time. Switching from music track to music track is easy. Style Jukebox Features: - Play Music files in a streaming playlist format - Create playlists - Pause the currently playing music track - Change Music track while the music is playing - Play to Spotify or Netflix Account - Play to any HTML5 video Player - Remote Control of play/pause/stop - Play back songs in the reverse direction - Create artist or playlist categories - Customization of your Style Jukebox - Connect via WiFi or using a Bluetooth Headset - One click start via Windows Key+R (Play list) or Launch via Button click - Transparent - Multi-player via Internet - Three skins - Dark, Light and Flat - Powerful Scanning engine - Song Caching - Fast Music loading - Style Jukebox Comments: Presented are four screenshots of Style Jukebox. The program features a simple user interface, and you need to just install and launch the application on your computer. It is compatible with all major operating systems, such as the OS X and Windows. You can set up a Cloud account and store your music in it. This app will scan every folder on your computer whenever it needs to update the music library. You can browse through the folders via the app or enter a URL. In order to get the app to look
