Keymacro allows you to create key macros for easy access to file folders or files. You can choose among different window positions, and can assign shortcuts to any of them. There are four types of key-shortcuts in Keymacro: Start/End, All, New/Old and Tab. The Start/End key-shortcuts allow you to set a window position, while the All key-shortcuts will change all windows positions to the specified position. The New/Old key-shortcuts add a new window position or move an existing window to the specified position. And finally, the Tab key-shortcuts split a window into two vertically, or give you a list of opened windows.

On the other hand, the program hasn't been updated for a very long time, and the price of the overall package seems too much. Nevertheless, you can make that decision by testing Fly Album for yourself. Rating: 6
