The amount of fiber the plant produces is the most of any non-food crop, and it is used to make paper, cloth, and many useful products. It's been used to make clothing, paper, and oil since ancient times, so it's no surprise that when you go to antique markets, you'll see people selling items made from hemp. Hemp is a member of the cannabis genus which includes at least 400 species and subspecies. It is a spiny, non-psychoactive plant native to the warm temperate and tropical regions of the Northern Hemisphere and distributed throughout the world today. There are currently three distinct varieties of hemp. Industrial hemp is grown strictly for its fiber. It is often called "drug" hemp because it is the most easily confused with the psychoactive variety which is used in making marijuana (marijuana is also known as cannabis and is marijuana's more common name). Industrial hemp is grown for its strong and valuable fiber, which is grown in almost exclusively tropical climates. This is the variety most popular

for making clothing, rope, and other products. The second variety of hemp, the narrow-leafed variety, is grown primarily for its seeds. This is the variety used for making hemp seed oil and for the oil itself. It is grown in temperate climates. The third variety of hemp, the broad-leafed variety, is grown for its stems. These are used in making paper, cloth, and other products. The History of Hemp Today

It has a package "com.commons.commands.examples.first", so I have a code similar to this: package com.commons.commands.examples.first; import com.commons.commands.Command; public class TestCommand extends Command { public TestCommand(int id){ super(id); } @Override public void run() { System.out.println("Run Test"); } public static void main(String[] args){ TestCommand command = new TestCommand(1); } } And it compiles fine, but when I try to run this command, it fails with exception java.lang.NoClassDefFoundError: java/lang/Class at com.commons.commands.Command.getClassName(Unknown Source) at com.commons.commands.Command.(Unknown Source) Even though I set path to my library to System.getProperty

For years, the golfer suffered from a problem with his back, and endured more than a dozen surgeries in an attempt to fix it. This week, the golfer announced that he'd undergone yet another procedure to repair a pinched nerve. But it didn't solve the issue. Earlier this week, Woods, who will turn 38 in August, told Golf Digest that the injuries were mounting up. At the time of publication, Woods has missed six tournaments in the last seven weeks. "You've got to have your body taken care of. You've got to take time off. It's going to be good for my body. It's going to be good for my mental attitude," he told Golf Digest. "As long as I still love it, I'm going to play and compete and do whatever it takes." He sounded optimistic. But we still don't know what the

root of his injury troubles is. We still don't know if Woods will return to competition. And we don't know if he'll have the same form that made him the greatest of all time. Woods has won 81 PGA Tour events, including 18 majors. He's the career scoring champion, the career money leader, the career PGA Tour player, the career money leader, and the career PGA Tour player. After all of that, this is what he has to say about the game: "What I enjoy the most about the game is playing with the guys," he told Golf Digest, "and the game has allowed me to do that. "I would give it back for the guys and I would give it back for the game I played as long as I could play." Here's what everyone is wondering: 1. What's wrong with Tiger's back? The issue dates back to last year, when Woods underwent spinal fusion surgery. He also
