What is the easiest way to develop a Web application for a client? I'm currently using RubyMine which I find great, but I need something more than just starting to develop with Rails. I want something that makes development much easier. I'm currently using Ruby 2.0.0 and Rails 4.0.0. A: RubyMine is a great IDE. I think it's one of the best available in the market. As a beginner, I can say that RubyMine will make your life much easier if you use it correctly. You can use as much as plugins or extensions as you want, to make your development easier. For instance, if you're working on a webapp, you'll be interested in the following plugins: watir for entering forms capybara for making tests rspec for creating specs formtastic for form handling twitter-bootstrap-rails for styling If you want to work without IDE, you'll be interested in: toolbelt, a plugin which helps you to easily install gems and update them nokogiri for parsing html and xml nokogiri-lxml for faster and more reliable parsing minitest for unit tests With the above plugins, you'll be able to use the majority of Rails features and plugins you want and it will make your life much easier in the long run. Goddess Veneration is a vibrant gathering of artists, writers, poets, and activists who pay homage to the divine feminine.
