The original, direct-to-a-computer version of the game Exile developed in 1986 by Chris Roberts, David Perry, David Grant and Brian Graham, was a hardcore, strategy game. The object of the game is to build an interstellar starship from the materials and mining equipment available to you and escape the star system where you have been marooned. You are warned that, even on the most optimistic of charts of future events, the odds are only favorable if the player has a minimal amount of valuables to work with. At first, the player can buy easily-extractable minerals and minerals in large quantities. As the game advances, however, the player must begin to out-sink other, better navigators. One particular new challenge is to gain a deeper understanding of exactly what its engine controls and is capable of. This works by "flying" a computerized craft around the planet, controlling it like a puppet, directing its course by the use of micro-jets and

the like. It's all very clever, and it was this part of the game design which kept it such a hard sell. It was also one of the most compelling and challenging parts of the game! The DOS version was released on August 16th, 2007. (Only the DOS version supports multiplayer.) The Source Engine port was released on May 12th, 2010. **ic culture**The 20,000 year old city of Göbekli Tepe is an ancient megalithic site, dating back to the hunter-gatherers who began migrating from the Mediterranean into the Southeast Asian steppes of modern Turkey during the Neolithic era. The town of Göbekli Tepe was founded 22,000 years ago and consisted of seven circles, a hundred or more graves, and numerous standing stones, known as T-shaped pillars, at least some of which were as long as 15 feet (4.5 m) tall. They are arranged in a large circle around a huge central stone, called the 'Tower of the Gods', positioned over one third of the way into the inner circle. Its purpose remains a mystery and is the subject of various theories. It is said to be a megalithic temple or a gateway into the underworld. The earth at Göbekli Tepe is riddled with rare coins and other artifacts dating back to ancient times, including the Venus figure with a gaping anus and genitals, shown here. The 'Tower of the Gods' stone, which may have been a massive shamanic or fertility idol, bears a spectacular phallic shape - a mushroom shape, similar to the male and female genitalia - with veins in it, especially on the top. Several scholars have postulated that the Tower of the Gods can represent a phallus resembling a mushroom or a soapstone sculpture of the 'Yaksha' fertility god. In the Hindu religion, a yaksha, who is a nature spirit, is considered a demon and once ruled over the underworld. The 'Yaksha' god has a giant phallic-shaped body, with the head of a boar. While similar to the 'inverted cone' of the goddess Samhain, it has a much larger shaft, as well. Other scholars have compared the shape of the 'Tower of the Gods' stone with the seed head of grain, exhibiting the

vulva and the 'Y-axis'. For this reason, they also suggest that it may also represent the ancient seed-grain goddess, Demeter, from the Greek culture. The Turkish people, who are Hindus, worship the sky-goddess, 'Ceylon' or 'Chillain' and the maize was brought by the ancient Atiśa Chinese monk in the 7th century by bringing a 'crystal
