* This download is 32-bit version of the program. If you have downloaded the 64-bit version, then move the executable with the name `vu_meter_win64.exe` to the corresponding folder. * In order to use the program, you only need to double click on the executable file to launch it. After the program has

been installed, it will be located under the "Programs" section in the Start menu. * VUMeter can run as a background application, so it does not require user interaction during the session. This program can run in a window, but the functionality is more similar to a multiple monitor that has no full-screen. * The program is easy to use: the interface is similar to an analog meter and has several options. The settings can be changed in the "Control Panel" window. * The "Zoom" button provides a magnification of the component. If you drag your mouse cursor to the right, the component will be zoomed in. This allows you to view the details of the components more easily. Drag the mouse cursor

to the left to zoom out. * The purpose of the double-click detection is to execute a different command depending on whether you double click on the program itself or on the "Play", "Pause" or "Stop" buttons. The same behavior is available when you click on the "Power" button. For this reason, it is important to make sure that there is enough room around the button to facilitate your hand movement. * VUMeter works on all the modern versions of the Windows operating system from Vista to Windows 8.1. The program should also work fine on the 32-bit versions of Windows 7 and Windows 8. For this reason, it is important to mention that this download will work only if you have installed the latest

Service Pack for 32-bit Windows. *

You can also download the trial version of the program to get an idea of how the program works. *

If you want to uninstall the program, open the Start menu and find the program with the name VU Meter. Under the "Programs" section, you will see a program that does not belong to any installed program. If you right-click on it, you will find an option to uninstall the program. *

If the uninstallation is not successful, you can manually remove the files with the name VU Meter by entering %LocalAppData%\Temp on the command line. *
