Gelassenheit, wie man sie nur bezeichnen kann! - The word «gelassenheit» has a very definite meaning, it refers to a «desire for detachment», to «a life lived in freedom», «to live in a way», which «leaves the soul free to experience», «to experience the GELAUS». This is all about the music of the Austrian band White Rose. Their music is characterized by elements of free classical, jazz, funk and soul music. Steil, Sehr geräuschfrei, mit soft und leichtem rhythm ist der Soundbereich von White Rose bekannt. Der Titel der Platte ist: "Ich bin es" ("I am it") Designed for a wide range of content, the audio mixes include mp3, aiff, wma and wav files at a sample rate of 44.1kHz and 16-bit depth. The audio files can be used in commercial, private and personal projects with the Restrictions of Use below. ValhallaRoom (VR) is one of the most famous and used reverb plugins (Pegasus DSP was the first). As the other reverb plugins that are made from time to time, VR was initially released as a demonstration tool by Lexicon. That makes it totally free. The original VR algorithm was inspired from the legendary VORTEX 4.0, also by Lexicon. Many versions have since been created, but the last one, based on original ideas by Billy Sauer and Rogier Bivand, was released in VST 3.0, and has been voted as favorite reverb plugin in many forums and websites. The newer VR versions are noticeably more improved than the original VR. In the mid-1990s, the VR reverb was introduced to Hollywood production, and it brought a big revolution to the music world. Many singers and musicians such as Steven Tyler, Sarah McLaughlan, Bela Fleck, Wyclef Jean and Michael Jackson used VR for their music productions, especially for their original songs. VR is used in more than 5 million computer running systems, from small and cheap PCs to the most expensive supercomputers. The new VR3 version is based on a physics model that simulates the sound waves that travel between the sound source and the surfaces, and the way this sound waves reflects and diffuses in every direction. This is the reason why reverberation is known as an indirect sound phenomenon. The new VR3 algorithm in fact becomes the most advanced reverb plugin ever made. Minimum Requirements - Required by the plugin to work are Windows 7 or higher, a compatible VST host application (Wavosaur, LiveProfessor, or any similar utility), and a wav recording of up to 96 kHz. Alternative VST Hosts - If the plugin is not compatible with your Wavosaur or LiveProfessor installation, you may need to use another VST host. (KVR, PureGrain Audio, RD-11, Audiogalaxy, Magix Soundtrack, etc. can all work.) Timestretch - You may need to use timestretching in order to do the plugin's reverb algorithms justice. ValhallaRoom now features eight timestretch modes, which includes two new ones, such as No Stretching and Vari Stretching. The latter timestretch mode makes it possible to stretch sounds vertically, horizontally, or both. It may take some trial and error to get it just right. Reverb Mode Combo Menu - The Reverb Mode combo menu includes 12 combination of algorithms. Selecting a particular algorithm by itself produces the expected effect. Silent switch - When turned on, the plugin may not work. This switch can still be used for its features and for other purposes, however. Reverb slider - A slider controls the strength of the reverberation, which ranges from 1 to 10. It can be used for tone shaping and other purposes. Delay time slider - A slider controls the delay time of the reverberation. It can be used for tone shaping and other purposes. Position time slider - A slider controls the initial delay time of the reverberation, which can be used for tone shaping and other purposes. High Pass Filter - A High pass filter is a box-shaped filter that allows only the low frequencies to pass through. This filter is used to cut off high frequencies that may clash with the sound you're using it with, or to correct the sound you're using it with, such as filtering out that distant, hissing noise made by ambiental sounds and echoes. High Cut Filter - A High cut filter is similar to a High pass filter, only it allows only the high frequencies to pass through. This filter is used to cut off high frequencies that may clash with the sound you're using it with, such as filtering out that distant, hissing noise made by ambiental sounds and echoes. Noise filter - A Noise filter is a box-shaped filter that removes the high frequencies at the
