
Samsung ML 1640 V1.01.00.91 Toner Reset

if i understand the situation correctly, the issue is that the cartridge is not detecting a new cartridge. unfortunately i don't have a samsung ml 1640 to test myself. i've found that the samsung ml-1640 does not have a "service mode" button. when the cartridge is out of ink or otherwise damaged, you can use the "service mode" button to reset the cartridge. this way, you don't have to deal with the "service mode" function. when the "service mode" button is pressed, the printer will reset the cartridge's counter to zero. if the printer is on and printing, the counter will be reset to zero when the cartridge is replaced with a new cartridge. resetting the counter is done by entering the [menu] > [1] > [9] > [3] > [4] > [menu] sequence and pressing the reset button in [data setup] or the [1934] button in [1934] only. the printer will not start printing when the counter is reset to zero. with the printer disabled and the counter reset to zero, the printer will start printing when the counter is set to a higher number. if the cartridge's counter is set to zero, you will see the following message on the paper tray: "reset cartridge". you will not see the message if you reset the counter to a higher number. so you know the counter is reset to zero, you just need to set it to a higher number. most likely, the counter was reset to zero because the cartridge was depleted of ink. the printer will no longer detect a new cartridge and will not reset the counter. when a new cartridge is inserted into the paper tray, the printer will start printing and will continue to print until the cartridge is depleted of ink. if the counter is set to zero, you will not get the "reset cartridge" message, and you will not get any other message. (it is possible that the printer detects that a new cartridge is present and that the counter is reset to zero, but it does not print a "reset cartridge" message to indicate the new cartridge's presence.)
