---

NeuralWorks Predict (Predict) is a software package that allows trained neural networks to make complex decisions. NeuralWorks Predict includes many tools for choosing the best models, training the best models, predicting the best models, and exploring the relationships between one or more training datasets and the best models. This software is built around the NeuralWorks Predict Engine (Predict), and it is designed to be a powerful, easy-to-use, extensible, and robust simulation, modeling, and prediction environment. NeuralWorks Predict provides many built-in tools for finding the best models. These tools include neural network architectures with built-in network selection, free-form neural network design and training, stochastic gradient descent, and other tools. NeuralWorks Predict also provides other built-in tools for performing EDA on training sets and testing the models. The NeuralWorks Predict Engine (Predict) includes libraries for handling linear and nonlinear regression, curve fitting, and much more. NeuralWorks Predict also includes libraries for performing data analysis, including exploratory data analysis (EDA), and time-series and forecasting. NeuralWorks Predict also includes integration with various software packages to allow neural networks to be trained and used in various contexts. NeuralWorks Professional II/PLUS includes an Instant proprietary facility that supports quickly generating a neural network based on one of the standard neural network architectures found in the neural network literature. After a network is created, all parameters associated with it can be directly modified to fine tune the network based on the target domain. The available architectures include feed forward networks, recurrent neural networks, autoencoders, LSTM (long short term memory), temporal convolution networks, and convolutional networks. Unlike Professional II/PLUS, there are no performance-based methods to inhibit over-fitting, automatic optimization of hidden layer size and a facility for pruning hidden units, or an Explain facility to identify which network inputs most influence output.

## **Neuralworks Professional Ii Plus Free Download**

The NeuralWorks Professional Plus package extends the previous NeuralWorks model by leveraging the installation and configuration capabilities of new DSP platform. NeuralWorks is available for Windows, Macintosh and Linux. The program is distributed as a complete turnkey solution, with complete documentation, including the NeuralWorks reference software and a tutorial, guides to neural network development, a comprehensive neural network design guide, an explanatory network lab, as well as an integrated development environment (IDE) that allows the user to edit and run code rapidly. It is being used in the construction of several platforms, including such companies as Freescale, TI and Analog Devices. In addition, the NeuralWorks Professional Plus package is extensible, allowing users to develop external applications using the tool's API and computational tools. The NeuralWorks family of products includes a full-featured neural networks development toolset for accelerating and simplifying neural network development. NeuralWorks is used by the world's largest hardware providers, including Freescale, Analog Devices, TI, Digital Logic and Infineon. While the program can be used for any purpose, it is designed as a platform for both neural network development and deployment. In addition to the core NeuralWorks package, NeuralWorks includes a neural simulator, a neural processing (NPP) engine, a NeuralWorks Library and the NeuralWorks Manager, a tool for visualizing, debugging and configuring networks. Neural capability, flexibility and performance gains are achieved by the use of digital signal processing (DSP) platform. 5ec8ef588b
